

SUMMARY

Data Engineer with 4 years of experience in designing and implementing scalable data pipelines, ETL/ELT workflows, and cloud-native data platforms. Strong expertise in distributed data processing using Apache Spark, Kafka, Python (PySpark), and SQL across Azure and AWS ecosystems. Experienced in building batch and real-time streaming pipelines, data lake and warehouse solutions, and implementing data quality, governance, and performance optimization frameworks. Proficient in data modeling, orchestration, and designing reliable data architectures supporting analytics, BI, and business-critical reporting systems. Strong collaborator with cross-functional teams including Data Engineers, Analysts, and Product stakeholders.

SKILLS

Programming Languages	Python, PySpark, SQL, Java, Shell Scripting.
Big Data & Data Engineering	Apache Spark, Apache Kafka, ETL/ELT Pipelines, Data Streaming, Batch Processing, Data Integration, Data Transformation, Star schema / dimensional modeling, Data Lakehouse architecture
Cloud Platforms	Microsoft Azure (ADF, Databricks, Synapse, Data Lake, Blob Storage), AWS (S3, Glue, Redshift)
Databases & Warehousing	Snowflake, Oracle, MySQL, SQL Server, Cassandra, MongoDB, Cosmos DB, Redis
Data Engineering Concepts	Data Modeling, Data Warehousing, Incremental Loads, Data Quality Checks, Data Validation, Performance Tuning, Data Governance, Data partitioning strategies, Performance Tuning, Data Orchestration
BI & Reporting	Power BI, Tableau, Excel (Power Query)
DevOps & Tools	Git, Jenkins, CI/CD Pipelines, Docker, Kubernetes, Maven, JIRA, Agile/Scrum

EXPERIENCE

Data Engineer Walmart, United States	Feb 2025 - Present
- Designed and implemented scalable real-time & batch data pipelines using Apache Kafka & Spark for high-volume telemetry, transactional data processing. - Developed distributed ETL/ELT pipelines using PySpark, Java for structured & semi-structured data transformations supporting analytics, reporting systems. - Defined and enforced data contracts, SLAs, and data quality frameworks ensuring consistency, reliability & trust across upstream and downstream systems. - Built event-driven data architectures & orchestration workflows enabling automated, repeatable & near real-time data movement across distributed systems. - Optimized Spark jobs and SQL queries, improving pipeline performance and reducing latency by 30%+ while optimizing cloud compute and storage costs. - Implemented monitoring, logging, and alerting frameworks for production pipelines enabling proactive issue detection and root-cause analysis. - Worked with distributed data stores including Oracle, Cassandra, MongoDB and Cosmos DB, collaborating with stakeholders to define data requirements and analytics use cases.	
Teaching Assistant – Database Systems Northwest Missouri State University Maryville, MO	Aug 2024 – Dec 2024
- Conducted SQL, database design, and normalization sessions, teaching core relational database concepts and practical query writing. - Mentored student teams on MySQL-based projects, focusing on schema design, data modeling, and query optimization techniques.	
Graduate Assistant – Project Management Northwest Missouri State University Maryville, MO	June 2024 – July 2024
- Managed academic project coordination, workflow tracking and student support activities across multiple program tasks. - Applied Agile practices using Trello and Microsoft Project for task planning, progress tracking and academic project execution.	
Cloud Data Engineer Microsoft, India	Aug 2022 - July 2023
- Designed scalable ETL/ELT pipelines using Azure Data Factory, Databricks, Spark, Kafka, PySpark for batch, real-time data processing workloads - Built PySpark-based transformation frameworks for data cleansing, standardization & enrichment of large-scale structured, semi-structured datasets. - Developed and maintained data ingestion, data lake, warehousing solutions using Azure Data Lake, Snowflake & Cosmos DB for analytics, reporting. - Designed dimensional data models, schema structures, and data marts to support BI dashboards, reporting systems, and analytical workloads. - Implemented end-to-end data workflows with incremental loads, orchestration, monitoring & alerting ensuring SLA compliance and data freshness. - Established data governance frameworks including validation checks, metadata management, lineage tracking, and dataset classification. - Optimized Spark and SQL workloads, improving processing efficiency, reducing latency, and enhancing cost performance across cloud environments. - Automated deployment of data pipelines using CI/CD pipelines with Docker, Kubernetes, and Jenkins ensuring scalable and reliable releases.	
Software Engineer – Data Engineering Capgemini, India	May 2021 - June 2022
- Developed backend and data integration systems using Java, Spring Boot, REST APIs, and SQL for enterprise data processing applications. - Designed and maintained ETL pipelines for structured data movement across relational database systems supporting reporting and analytics. - Optimized SQL/PLSQL queries, stored procedures, and indexing strategies improving database performance by 25% in production systems. - Built data ingestion workflows integrating multiple enterprise applications into centralized data repositories for analytics and reporting. - Worked with Oracle, MySQL, MongoDB, and Cassandra for structured and semi-structured data processing and storage systems. - Assisted in data modeling activities including schema design, relational mapping, and reporting data structures for business use cases. - Participated in cloud migration initiatives transitioning on-premise systems to cloud-based data platforms with minimal downtime. - Implemented CI/CD pipelines using Git, Jenkins, and Docker for automated build, test, and deployment processes.	

PROJECTS

Healthcare Analytics Dashboard - Power BI
- Developed interactive dashboards for healthcare data analysis including patient demographics, diagnosis trends, and visit patterns. - Performed data cleaning and transformation using Power Query and Excel datasets. - Created KPI-based visualizations for clinical reporting and operational insights. Implemented filtering and drill-down capabilities for exploratory data analysis.
Capstone Project – Campus Recycling Management System
- Designed a structured data storage & processing system using ASP.NET Core MVC, Microsoft SQL Server for managing campus recycling data. - Developed basic ETL-style workflows for data collection, cleaning, and storage to support reporting and analysis. - Generated automated reports using SSRS to enable operational insights and trend analysis of recycling activities. - Used GitHub for version control and followed Agile practices for collaborative development.

EDUCATION

Masters in Information Systems	Aug 2023 – Dec 2024
Northwest Missouri State University Maryville, MO
